Jeff is an associate professor in the School of Architecture at the University of Florida and associate director of the Florida Institute for Built Environment Resilience (FIBER). The Institute is committed to the design, planning, construction and management of resilient built environments, with strong interests in the well-being of the people and communities who inhabit them. Jeff leads the Florida Resilient Cities program which works with communities across the state to connect resilience challenges with UF faculty and students through research opportunities. The inaugural city is Port St. Joe, which is still recovering from Hurricane Michael.
