Data Repository

# What Is QDR?

## A FOCUS GROUP DISCUSSION WITH THE HEALTH WORKERS

DATE: 3<sup>rd</sup> August, 2016

LOCATION: Federal Teaching Hospital, Abakaliki

DURATION: 74 minutes

I = INTERVIEWER

P = PARTICIPANTS.

[Names of participants have been omitted. Study team member names are in bold.]

**I:** Good morning.

**ALL:** Good morning.

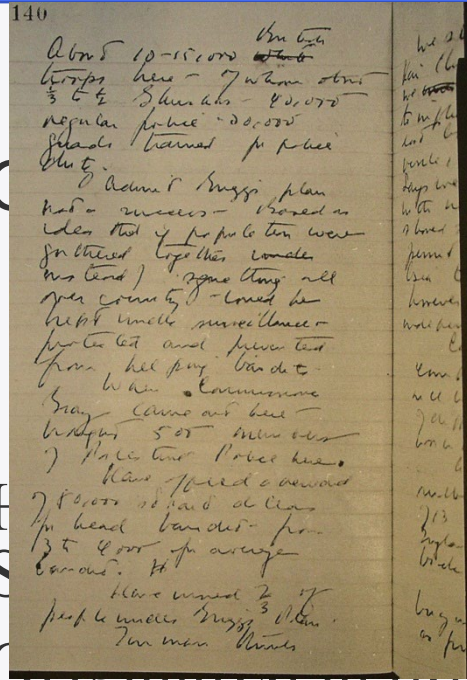

**I:** Some of us were not here when we did the introduction. **M Mbachu.** Here with me are;

**I2:** Adanna Chukwuma

**I3:** Eze Nelson

**I:** What language do you prefer that we use in this discussion: a combination of both?

**ALL:** Combination of the two.

# QDR—fills a niche based on existing best principles + innovates in that space

## About QDR

---

**Sharing data and its documentation for secondary analysis**

**Empowering qualitative and multi-method inquiry through guidance and consultation**

**Providing data and materials to enrich and enliven teaching**

**Developing innovative approaches for enriching publications with data and analysis**

## Our Mission

---

QDR curates, stores, preserves, publishes, and enables the download of digital data generated through qualitative and multi-method research in the social sciences. The repository develops and disseminates guidance for managing, sharing, citing, and reusing qualitative data, and contributes to the generation of common standards for doing so. QDR's overarching goals are to make sharing qualitative data customary in the social sciences, to broaden access to social science data, and to strengthen qualitative and multi-method research.

[Learn more about us >](#)

# Uses of Shared Data the “why”

- Secondary analysis and collaboration
- Transparency for specific publications
  - Replication
  - Reproducibility
  - Verification
  - Traceability of methodological choices
- Teaching and training
- Giving back to participants / communities
  - Direct sharing back to individuals
  - Not over-researching same communities

“Sharing scientific data accelerates biomedical research discovery, enhances research rigor and reproducibility, provides accessibility to high-value datasets, and promotes data reuse for future research studies

Ultimately, the sharing of scientific data expedites the translation of research results into knowledge, products, and procedures to improve human health.”

# Why Share (Qualitative) Data?

- **Be a good colleague:** Allow others to scrutinize and build on your work
- **Be a good teacher:** Students benefit from working with “real” data
- **Be a good citizen:** Open science is more impactful science
- **Get funded and published:** Scientific funders and publishers increasingly expect data sharing and research transparency
- **Get cited:** Lots of empirical evidence across different disciplines that publications whose data are shared, do get more visibility and attention

# Data Management and Planning the “how”

Think about data sharing early on and holistically

Consider data security and access: Both during project and after

Plan & organize early: Folder names and structure, file names

Create documentation throughout the project

# Benefits of Sharing Data in a Repository the “where”

- Stable links (Digital Object Identifiers- DOIs)
- Long-term digital preservation
- Meeting institutional requirements
- Data management planning and curation assistance
  - can help you with sharing data *are//*
- Makes data more visible/easier for others to discover, access, cite
- Interoperability across disciplines
- Access controls, embargoes, etc.

→ **FAIR Data**

# What Makes Data FAIR?

## Findable

Rich metadata, permanent identifiers

## Accessible

Data and metadata are machine-readable in standardized ways

**Interoperable** Metadata is described in standardized vocabulary

## Reusable

Metadata meet community standards and data have clear license

# Shared Qualitative Data: Some Examples

Interviewer: Kristal

R: My French isn't very good.

I: No, no, it's fine, it's fine.

R: I didn't go to school. I only did three years.

Background: That's why his French isn't very good.

R: It's mixed up with Bomu. It's not good.

B: ...if it's not good, we can translate again.

R: That's already happened.

I: (laughs) Ok, and you are Bomu?

R: Yes, Bobo.

I: Bobo, ok. And you are how old?

R: I was born in 1956.

I: 56. Ah, that's just like my mom! That's 54, no, 55. This year.

B: 55 years old.

I: And you speak Bomu, French?

# De-identified, Restricted Interviews & Documentation

1 CFS- 20:19  
2 Interviewer: Well this one's easy. This is the um, exit interview where I get an opportunity to  
3 kinda ask you about, um, our sessions and to get ideas from you so that it helps  
4 us with our writing of our next grant.  
5 Patient: Oh okay.  
6 Interviewer: So we wanna make sure and see what worked, what didn't work. You know,  
7 remember I told you this was a pilot so we're trying it out to see if it worked.  
8 Patient: Right.  
9 Interviewer: So um, in general did you- overall, how was your experience of this Conquer  
10 Fear program? Did ya, did it- did it help? Did you like it?  
11 Patient: Yes. It was a positive experience, because I learned things that um, I didn't- I  
12 didn't know beforehand. It- it taught me how to um, focus on what I was doing  
13 at the time and it taught me like not to um, read into stuff you know, like don't  
14 panic right away when I would feel a symptom.  
15 Interviewer: Mhm.  
16 Patient: Uh, you know, and I remember that my last symptom, remember when I went to  
17 the hospital?  
18 Interviewer: Yes.  
19 Patient: I didn't panic about that even though it hurt a lot, um, because it happened to me

## Exit Interview Guide-CFS

We want to understand your thoughts about your experience with the Conquer Fear SUPPORT (CFS) program. We want to know what helped and what didn't help you. We appreciate your honest opinions as they will help us improve the program for future patients.

1. In general, can you tell us about your overall experience with the Conquer Fear SUPPORT program?
  - a. What did you find helpful?
  - b. What did you find challenging or less helpful?
2. Can you describe any concerns, worries, or needs you had related to your cancer experience before you participated in the program?
  - a. Can you describe any changes in how you feel since participating in the program? (symptoms, feelings, concerns etc.) Have you felt better, worse, or the same since participating in the program? Can you think of any specific examples?

Do you feel that you have gained anything of value?

3. We would like to get feedback on the individual sessions. Do you have any suggestions regarding the content of the sessions? (e.g. *discussion of fear of recurrence model, discussion of goals and values, discussion on how to respond to symptoms and avoid excessive monitoring, healthy lifestyle guidelines, and new plans for dealing with fear of cancer recurrence*)
  - a. What sessions did you find most helpful? What sessions if any did you find less helpful or challenging and why?

Do you think any of the sessions could be self-study versus in person?

4. Can you describe your experience with the home practice exercises and assignments? (e.g. *values clarification; attention training exercises, detached mindfulness practices.*)

"Ninguém Me Chama" - "Nobody Asked Me": Gendered Patterns of Participation in sea Turtle Conservation in Northeast Brazil

in the area for a few years, noted that there were not many opportunities, while at the same time commenting that they were not aware of many groups and did not know many people in the community. Conversely, participants of the soccer club had been invited to participate in a beach clean-up and other conservation-related activities by conservation staff members that were also members of the group. Because of men's social and professional networks they may be more likely to be invited to participate or belong to a group, and, in this case, conservation activities. Women can also be motivated by their social networks to participate, as were the women in the artisan association who were nearly all friends, neighbors or relatives. However, social ties can also restrict the variety of activities and groups they may be invited to participate in or are exposed to. All focus group participants indicated that they had friends or family members that also participated in the community group. Although men may face less structural and agency-related barriers to participation than women, **women from the artisans' group and the parent group for the youth association felt that men's participation in those groups was inhibited by 'machismo,' or societal pressure to conform to male stereotypes.**

Women's motivations for participation in this study focused more on learning and supporting their families (providing education and opportunity for their children or learning a skill that could help them earn extra money), and social interaction (getting out of the house, meeting new people, or spending time with family and friends). However, social interaction was an important motivator for both men and women, as much of their community participation serves the dual purpose of providing leisure and recreation alongside personal, familial, or community benefit. Despite the belief that community members were not interested in participating or individualistic, the men and women in the focus groups were motivated to participate as a way to foster unity within the community. **Participants felt that they benefited from the unity of the group, or "união," stating that "united they achieved what they could not alone" and "unity provides strength."** The theme of unity and collaboration was also mentioned when discussing the types of conservation activities or programs that could or should be carried out in the community. While a number of activities were listed (such as

P1: Tem homens participando bastante porque hacen artesanato muito bonito, muito bem feito. Mas tambem sao um pouco de...  
P2: É um pouco de machismo.  
P1: É.  
P2: Tem um pouco de...  
P3: É orgulho  
P1: Mas tem...eu sei que tem grandes talentos.  
P2: Se hacen luminarias..  
P1: É muito dificil para os homens...é bem dificil né? Collective - É  
P2: o machismo

**Source Excerpt Translation:**

P1: There are men that participate a lot because they make very beautiful handicrafts and art, very well made. But also they are a little...  
P2: It's machismo a little.  
P1: Yep.  
P2: They have a little..  
P3: It's pride.  
P1: But they have..I know that they have great talent.  
P2: They make lamps...  
P1: It is very difficult for the men...it is really difficult, isn't it?  
Collective - It is.  
P2: ..the machismo...

**Analytic Note:** In this discussion among focus group participants from the local artisan's group, which was made up entirely of women, the group discusses the lack of men in their group. It is common for men in the area to make different types of handicrafts., such as the lamps mentioned as well as woodcarvings, paintings, and weavings. However, they felt that 'machismo' and pride kept them from participating in a group of all women. In another focus group of all women the issue of machismo also arose when discussing men's participation with the youth group activities. Often the group hosts gatherings where food is served and asks families to volunteer to help cook and serve. This responsibility always falls to the women, as men don't see cooking and serving food as 'men's work, reinforcing local gender roles. There are many men who own restaurants in the area and cook or serve food in this context, this adds an additional gender dimension between paid and un-paid work. This excerpt also illustrates how cultural norms lead to gender segregated networks.

Rinkus, Marisa A.. 2019. "Data for: "Ninguém me chama" - "Nobody asked me": Gendered patterns of participation in sea turtle conservation in Northeast Brazil". Qualitative Data Repository. <https://doi.org/10.5064/F6SGXPOS>. QDR Main Collection.

# Sharing Human Participant Qualitative Data

---

# Data Sharing and Ethical Concerns

- Research must be designed, reviewed, and undertaken to ensure integrity, quality, and transparency
- Any promises for confidentiality and/or anonymity of respondents must be respected
- Harm to participants must be avoided in all instances
- Any conflicts of interest must be explicit
- Participation is voluntarily, free of any coercion, *and informed*

# DMP-IRB Nexus

- IRB: required for human subject research based on federal regulations; typically based at an institution
- DMP: a document required by funders; typically written by PI and not closely monitored by institution
- *Both require you to document data collection, sharing a security details*
  - *It is critical for PI to ensure that the two documents al*

# Informed Consent Considerations

- Balance: being transparent about data use, but remain intelligible
- Don't underestimate participants willingness to help science, not just you
- Opt-in consent for data sharing can be great; IRBs familiar with it as “tiered consent”
  - Careful with quantitative data & optin

# De-identifying Qualitative Data

- Removing/ replacing information in text can distort data, make them unusable, unreliable or misleading. **A balance to preserve context**
- Remove direct identifiers, or replace with pseudonyms. **often not essential research info**
- Avoid blanking out; use pseudonyms or replacements [IDENTIFY REPLACEMENTS]
- Plan and apply deidentification at time of transcription
- Consistency within research team /project
  - Keep deidentification log of replacements or removals made; keep separate from the processed data files

# De-identification Protocol: Example

## Some Guidelines on Making the Transcriptions Anonymous:

We change the names of many particular details (places, people, jobs, etc...) to more general categories. In an interview, the name of a of a particular detail will be assigned the general category in all caps and a number ##. The number will be consistently assigned to this particular detail throughout the transcribed interview. For example, if a broker named Jorge Martinez is mentioned, we will change his name to REFERENTE ##, where ## is a number that is assigned to Jorge throughout the transcribed interview.

Eliminate names of municipalities. Anonymizing the names of the cities provides the best protection for the respondents. Of course, it is not possible to eliminate every detail about a municipality without losing much of the context in the interview. In all of the transcripts MUNICIPIO 1 will be the city, in which the respondent is a broker and/or city council member. Other cities that are named will be assigned a number so that the one city will have the same number throughout the individual transcript. The exception to this rule will be when a respondent refers to Capital or Buenos Aires. In this case, the risk of revealing the identity of the respondent's city or the identity of the respondent is low, and the distinction between Capital and the other cities is an important one. Similarly the names of streets will be termed CALLE and assigned a number. If a particular zone in a city is mentioned, it will be termed ZONA ##. If a neighborhood in a city is named it will be termed BARRIO ##.

All of the names of politicians will be changed to more abstract terms with the exception of the current and preceding presidents and governors. If possible the name of the politician will be changed to the politician's office. For example, if Javier Ramos is a concejal then we would change his name to CONCEJAL ##. If the position of the referenced politician cannot be identified then the name can be replaced with POLITICO ##. Each individual will be assigned a number and this number will be consistent throughout the transcript.

Entrevistador: ¿Y en qué barrio pensás, digamos, cuando, vos en qué barrio..?

Entrevistada: Bueno, yo soy BARRIO 1 y BARRIO 2. BARRIO 2 y BARRIO 1.

Entrevistador: Y, digamos, si tuvieras que, de esos referentes que conocés de diferentes partidos, dar un número, ¿te animás a dar un número, cuántos son?

Entrevistada: Y, son unos cuantos, son muchos eh, yo entiendo que son más de cincuenta

Entrevistador: Bueno, cincuenta me parece...

Entrevistada: Te digo, por ejemplo, en MUNICIPIO 1 hay [detalla el número] bibliotecas populares, reconocidas por la CONABIP, que es una institución nacional que las agrupa y ....

Dunning, Thad; Camp, Edwin. 2015. "Brokers, voters, and clientelism: The puzzle of distributive politics". Qualitative Data Repository. <https://doi.org/10.5064/F6Z60KZB> QDR Main Collection. V1

# Applying Appropriate Access Controls

“As open as possible, as closed as necessary” (European Union)

- Open data (license “CC0” or “CC-BY”) – often not appropriate for QUAL data
- Public-use data
- Timed Embargo (in 1, 3, 10, 100 years) NB: not a publication-based embargo
- Access by application
  - Identity and affiliation checks
  - Specific training requirements (e.g., CITI)
  - Signed DAUAs
  - Secondary IRB (typically for data that still has PII)
- Access using enclaves (not currently at QDR, but available for quantitative data at other repositories)

# **QDR for Weather / Climate / Environmental Social Scientists**

---

# Consultations at Different Points in the Project Lifecycle

## When planning your research

- DMP / DMSP consultations and review for grant proposals
  - Including help with costing and budgeting
- Informed consent drafting advice and review
- Data management consultations

## When depositing your data

- Disclosure risk review
- Data organization and documentation consultation
- Data/file transformation

# Depositing *Your*Data in QDR

- Initial Consultation: Possible anytime, best at project start
- Initial Deposit & Curation
- Final Review
- Publication & Promotion
- Can be qualitative only or mixed methods
- Various data formats acceptable
