

Assessing Rural Resilience: Navigating Natural Hazards for Sustainable Futures

Student: Prithila Purkayastha
 Advisors: Dr. Brittany Brand, Kyle Peterson, MPH

Motivation Statement

Comprehensive resilience assessments play a vital role in helping communities understand risk profiles, implement efficient mitigation strategies with limited resources, and recover with the future in mind.

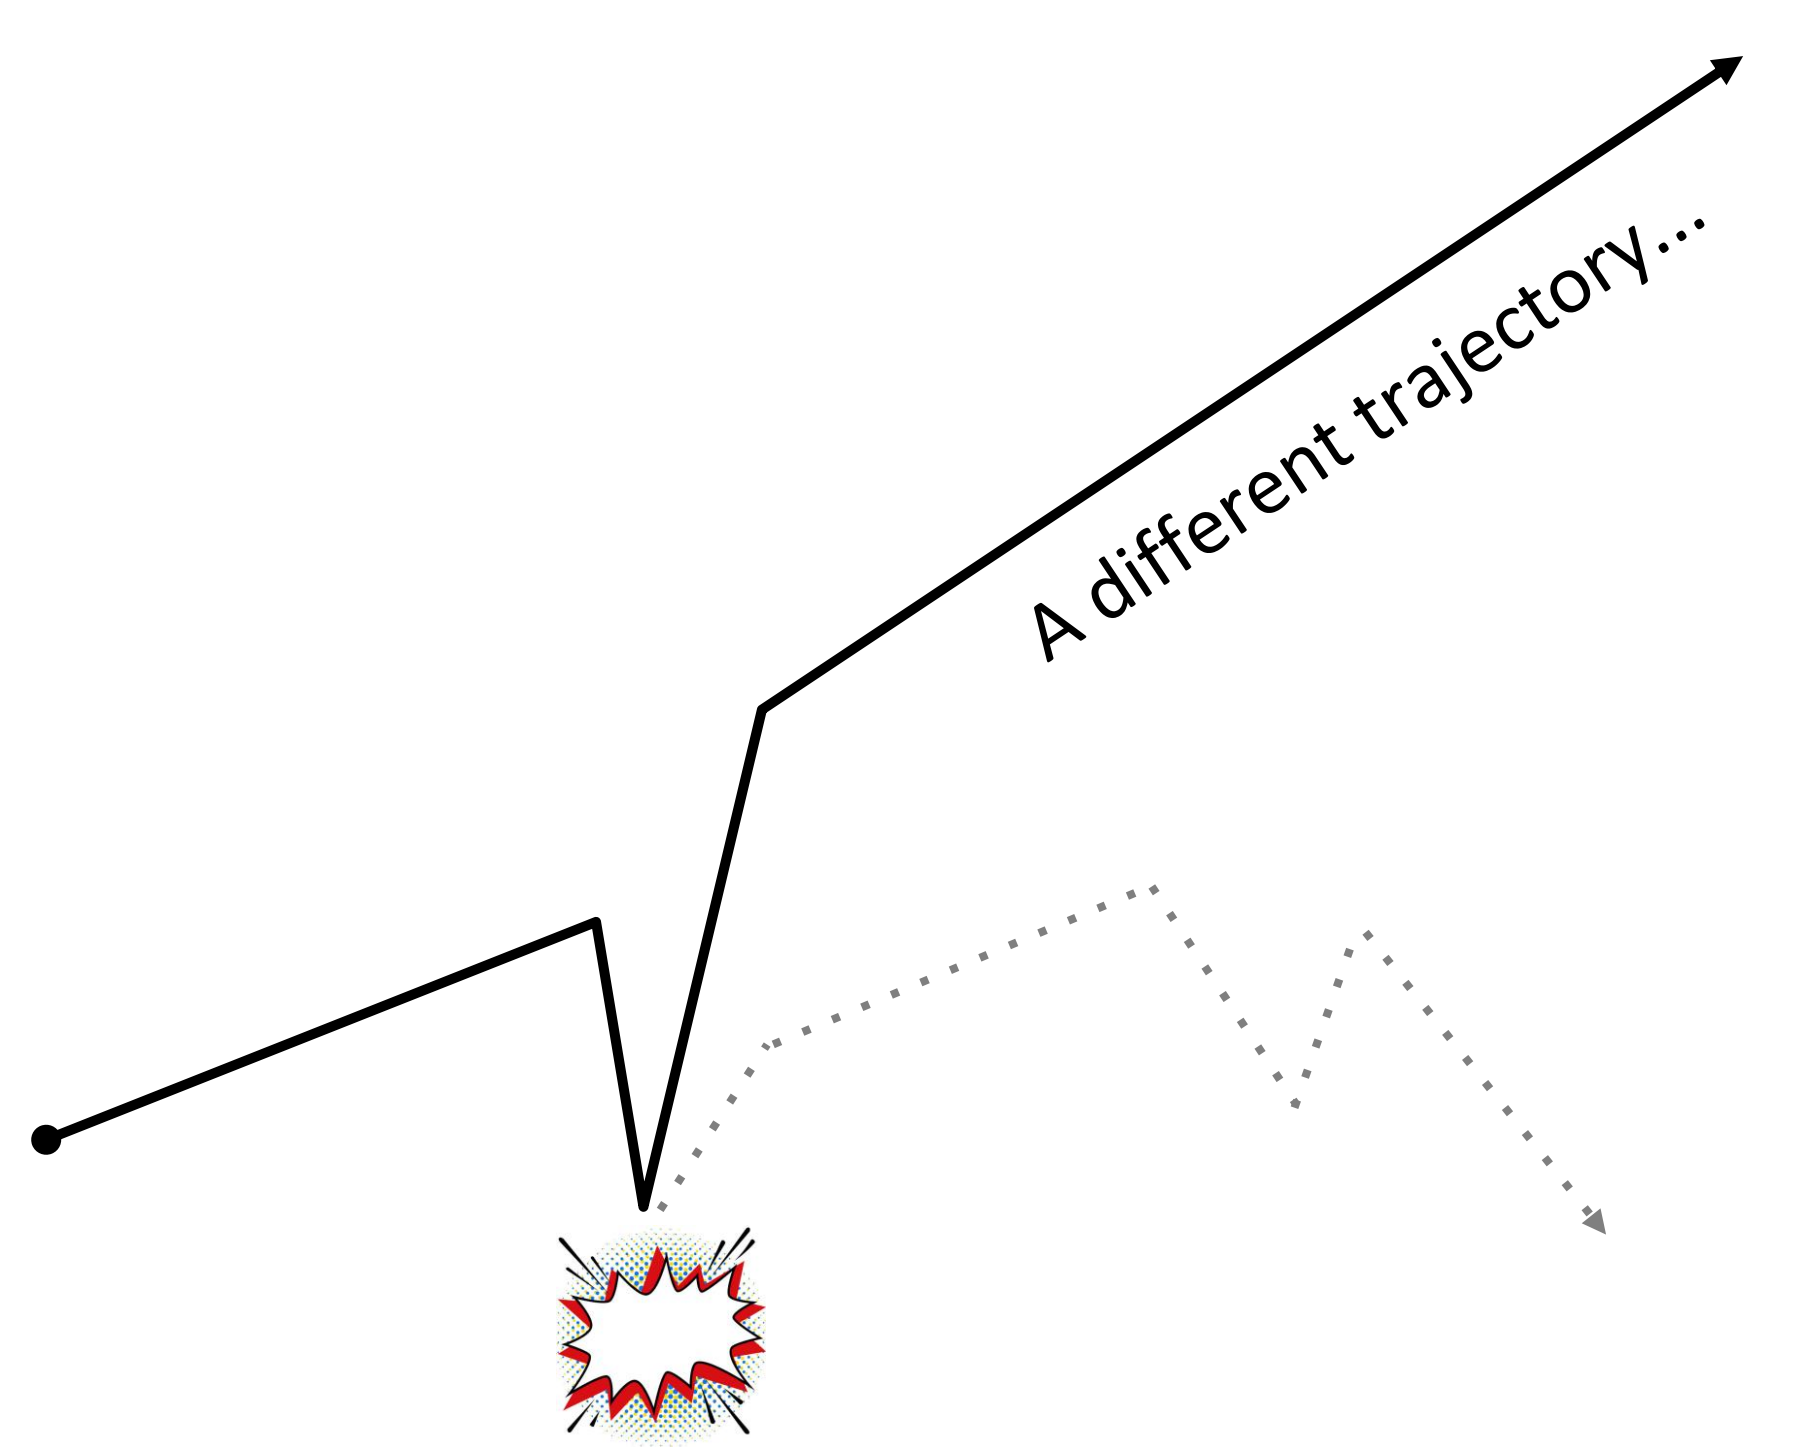

Problem Statement

There are limitations in identifying a precise framework for assessing holistic rural community resilience, as none of the existing frameworks adequately adapt to rural contexts.

Objective Statement

We propose a rural adaptation of the *City Resilience Index*, which includes a customized and simplified resilience assessment and strategy-building framework with the dimensions of:

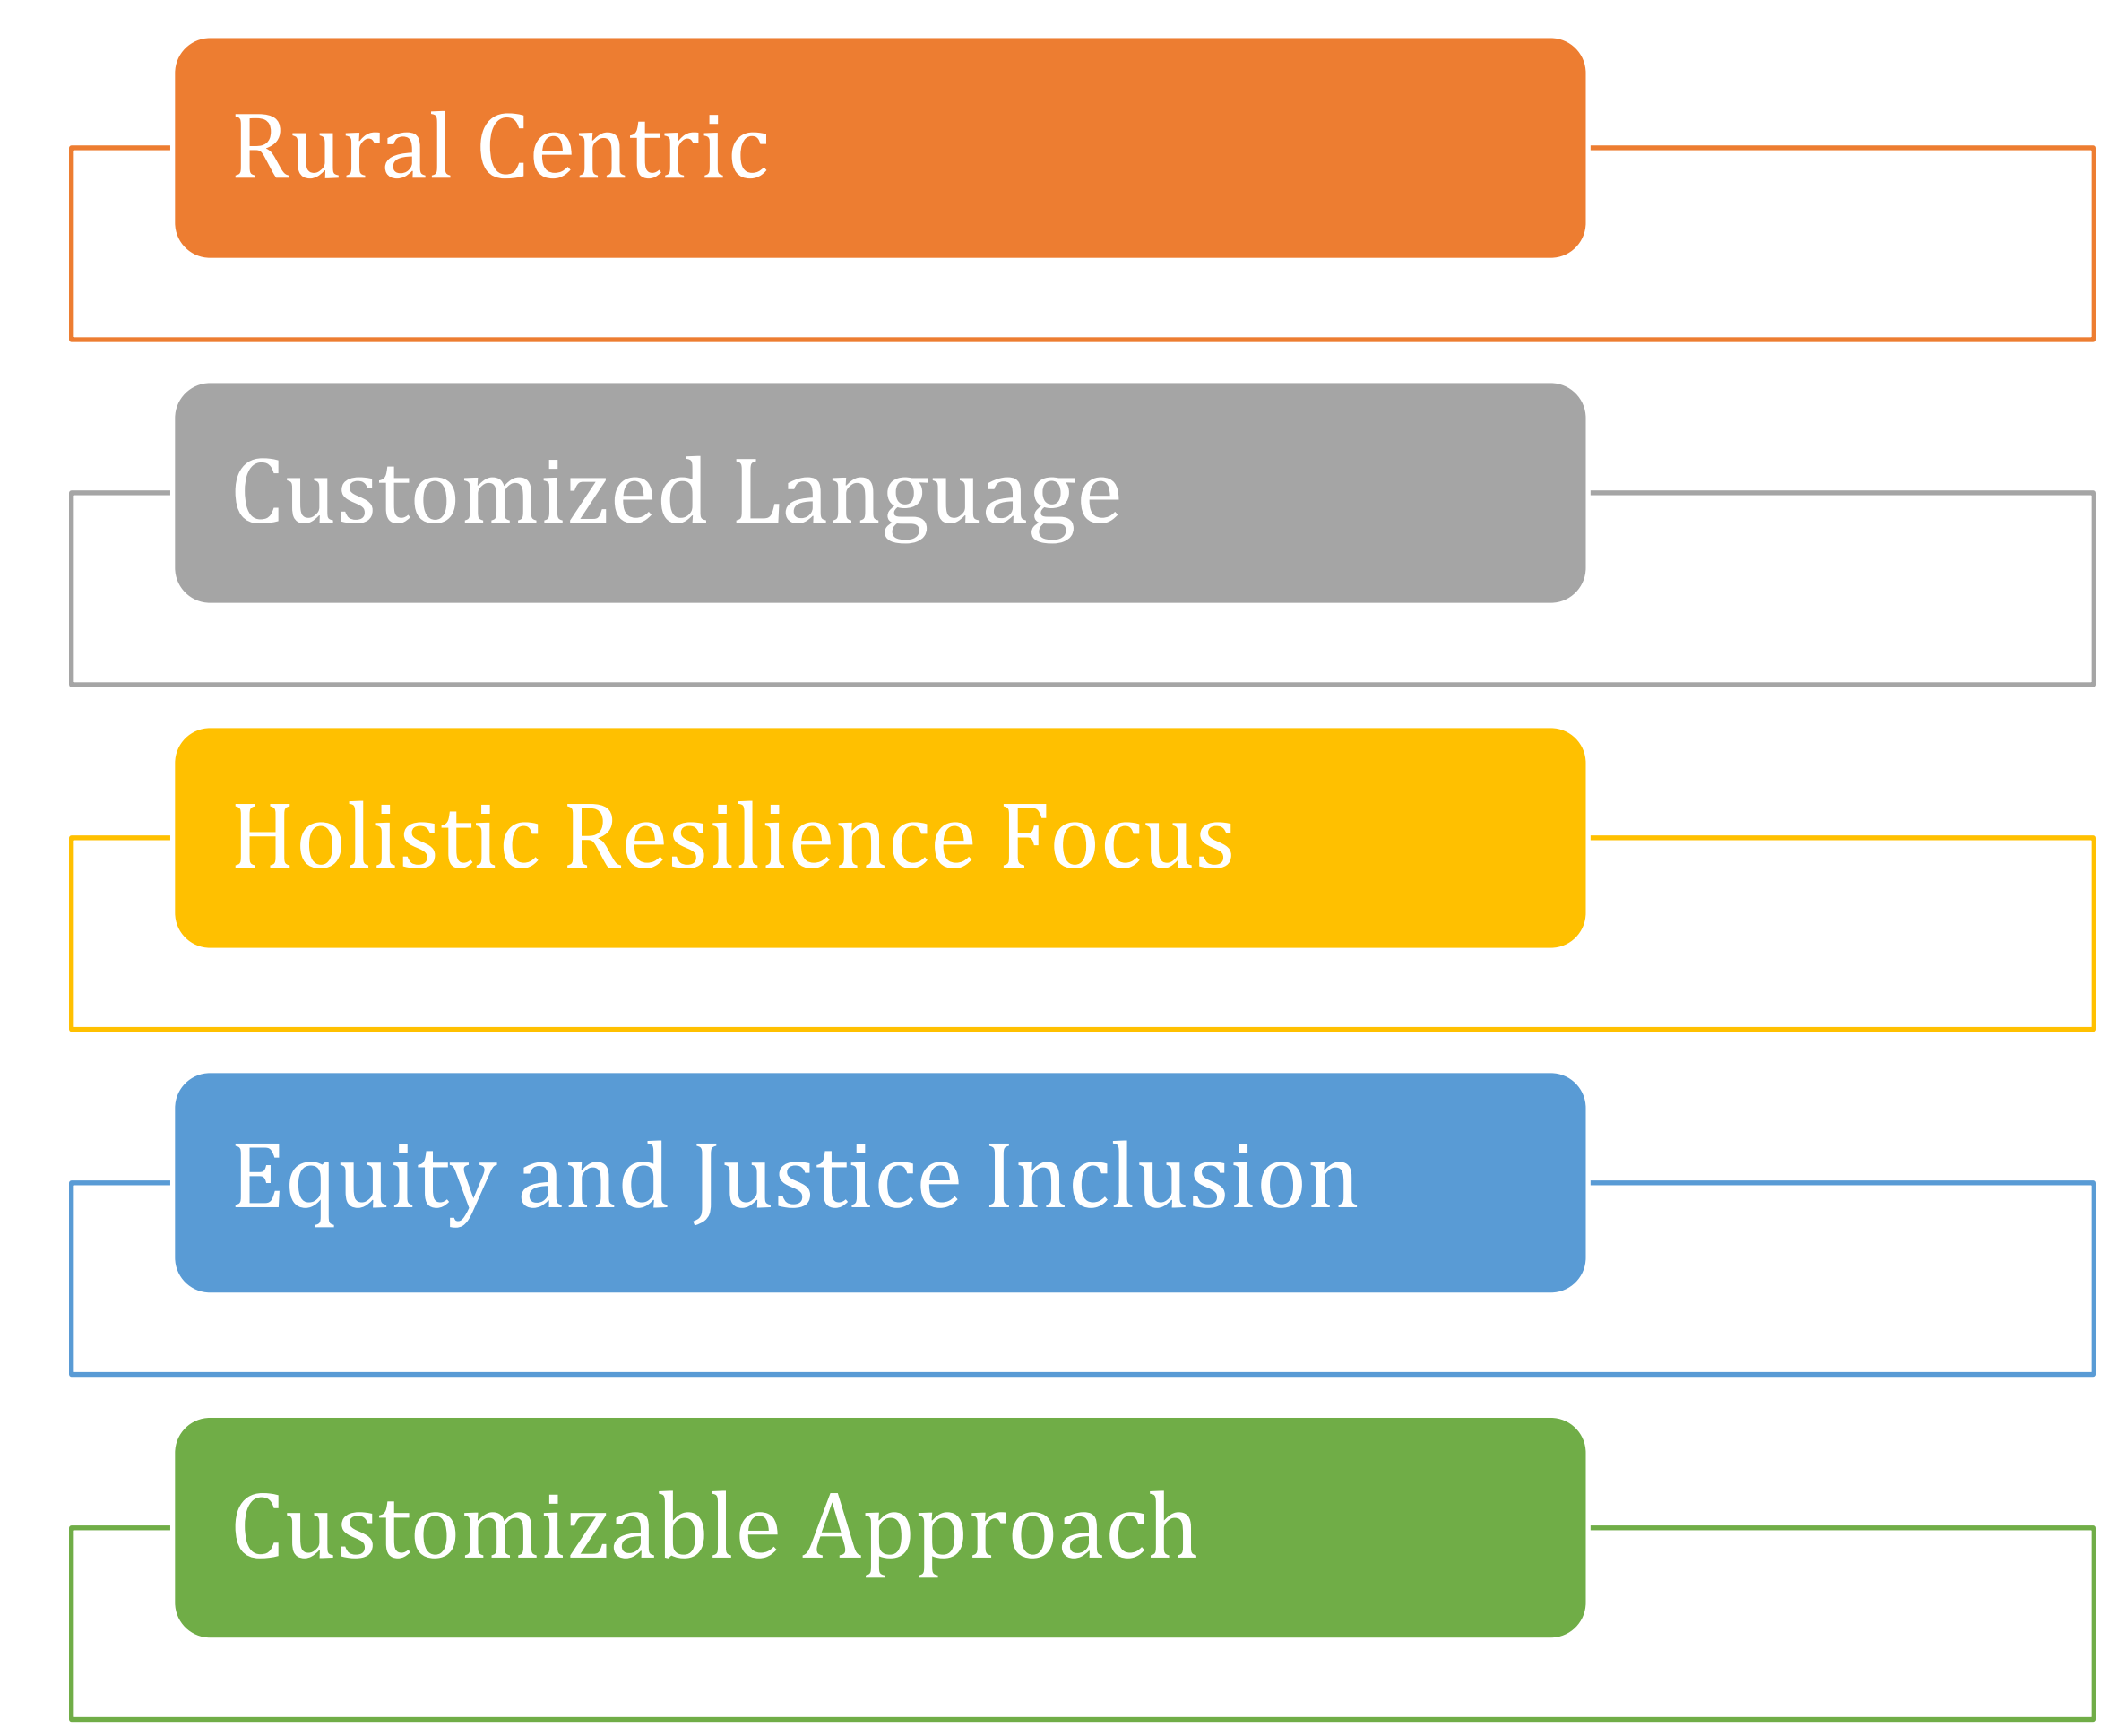

- Economy and Society
- Leadership and Strategy
- Health and Wellbeing
- Environment and Infrastructure

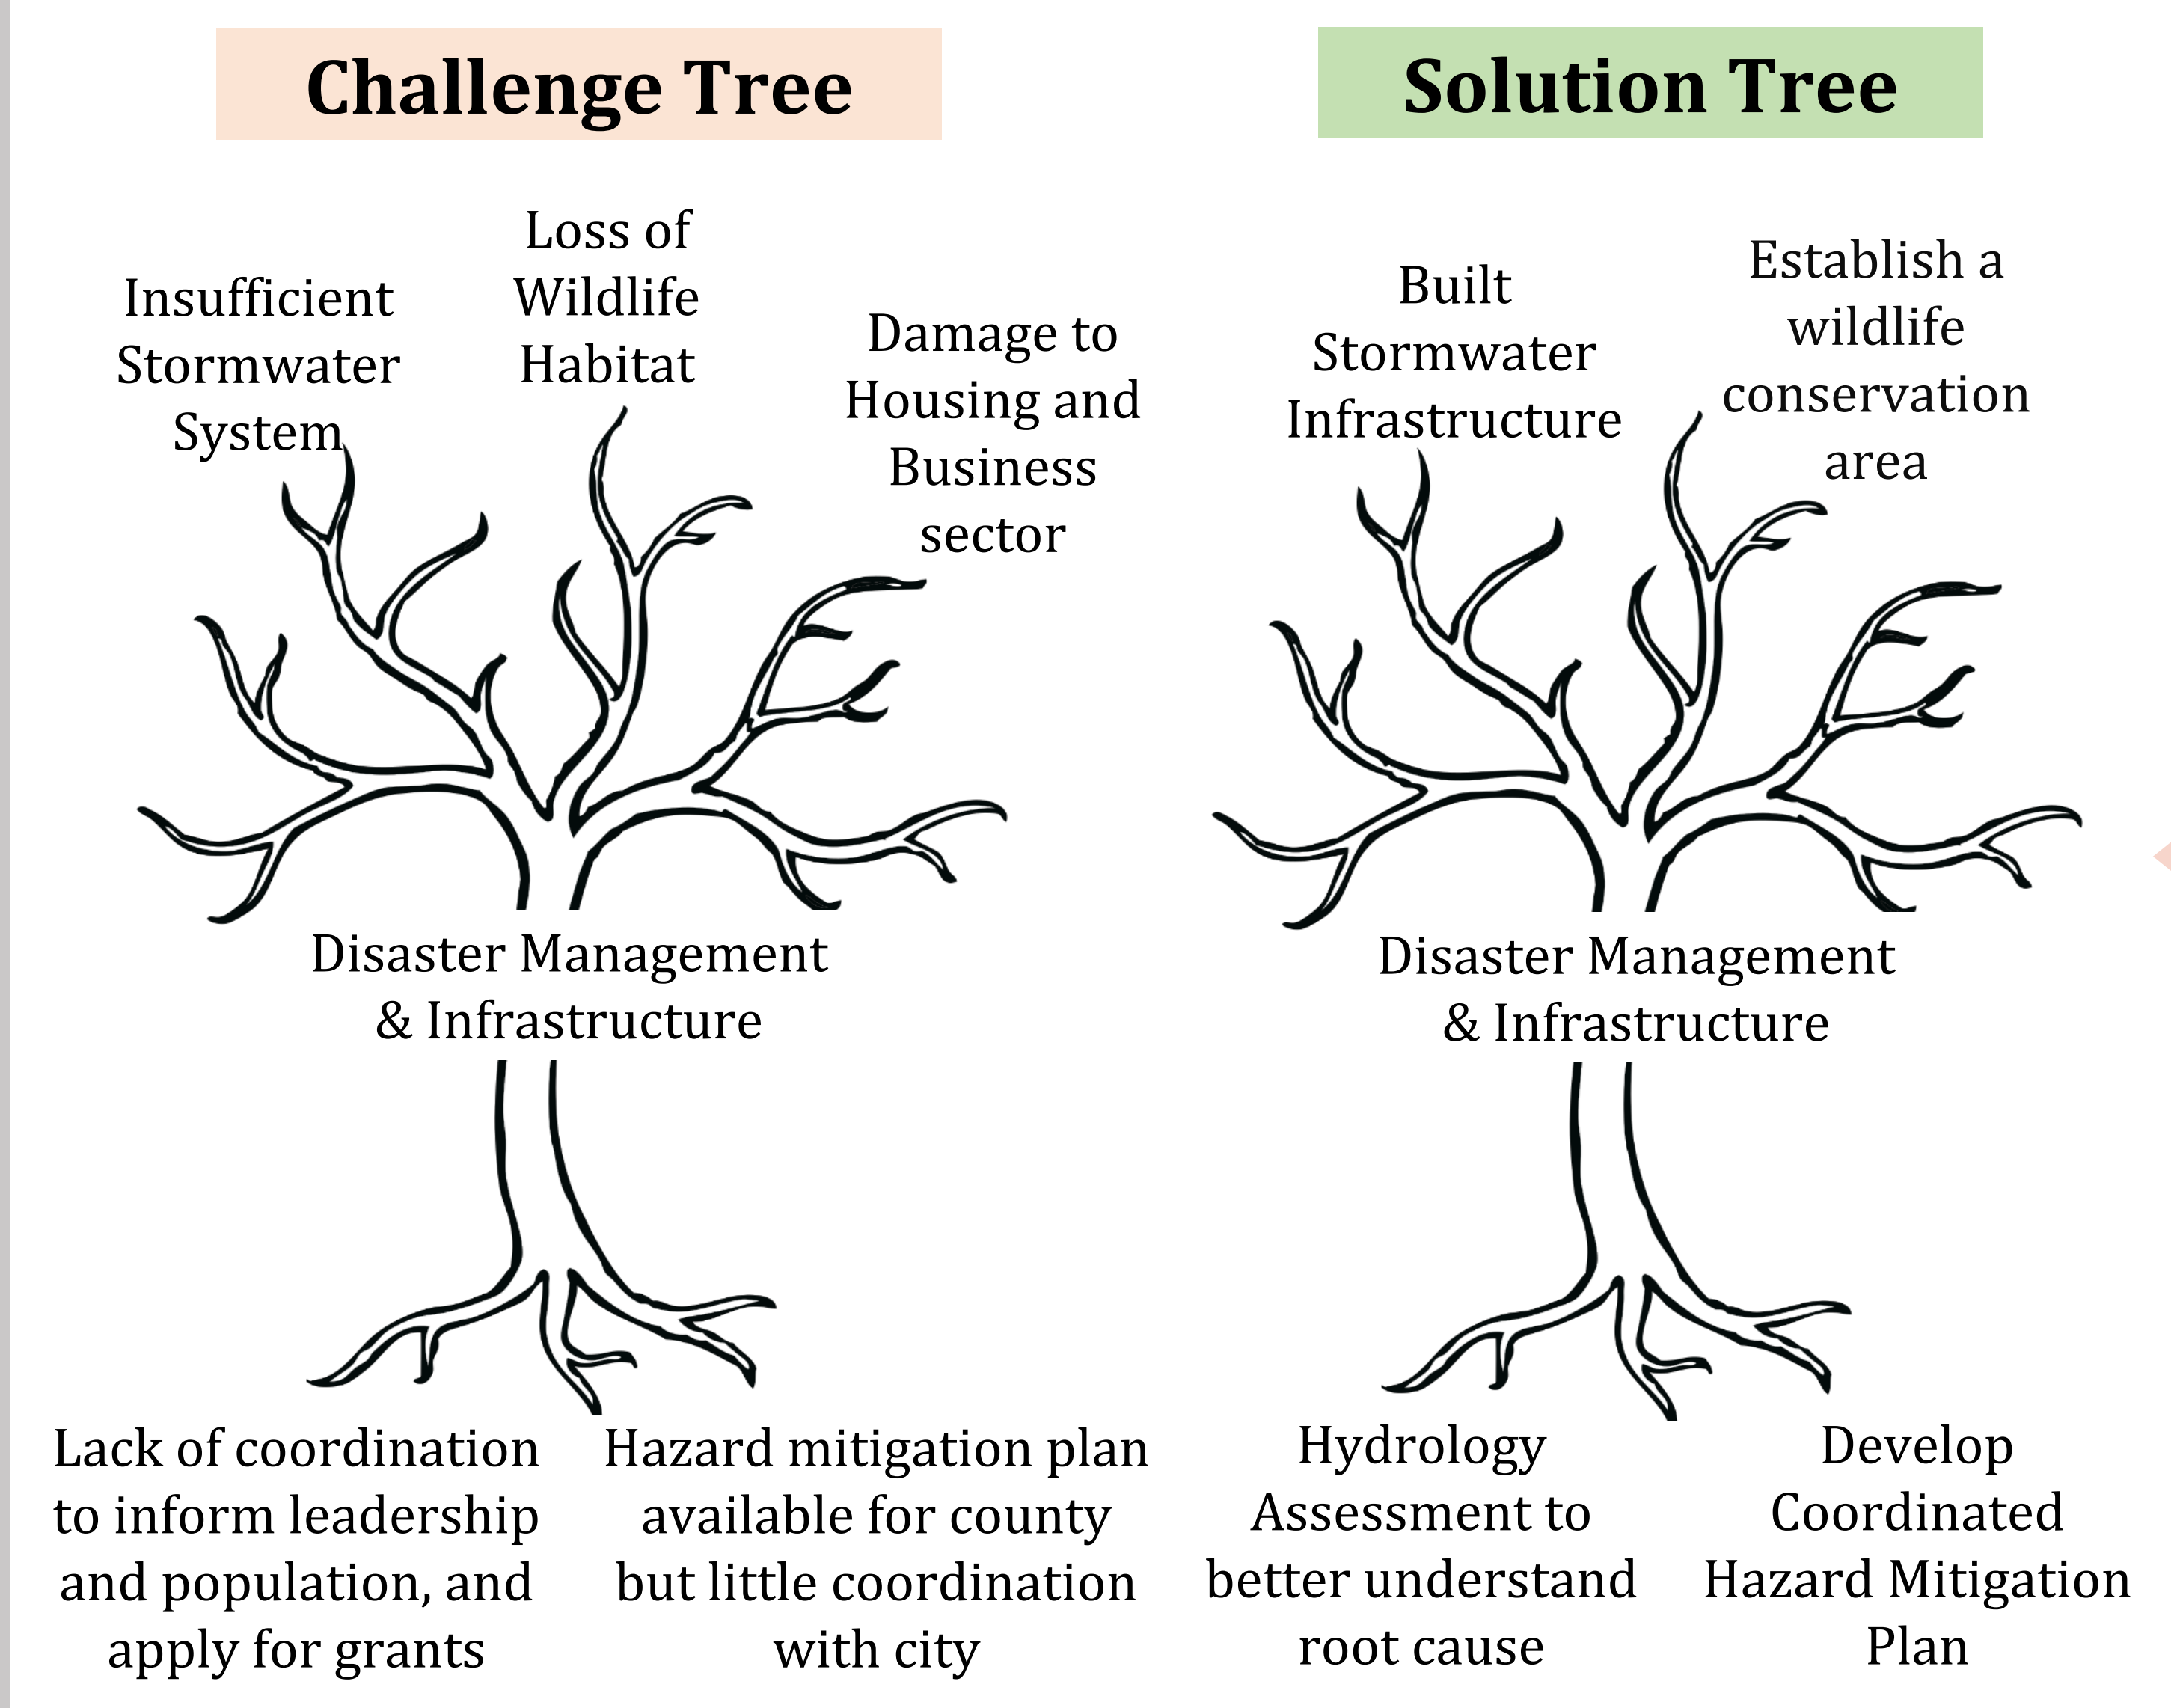

Step 1: Resilience Pre-Assessment

Step 2- Customized Resilience Assessment

Step 3: Community Identifies Solutions

Step 4: Action Planning

Step 5: Activating Resilience Strategy
